

GOOD PRACTICES FOR USING AND MAINTAINING B-BOX

- Keep B-BOX away from heat sources, heated surface, sparks, flames, and other sources of ignition.
- Handle with care; during assembly, watch out for splinters and screws.
- Place on a flat surface and avoid tipping over.
- Avoid prolonged exposure to water.
- Do not expose B-BOX to strong winds.
- After observing the bees, close the side panels and the lid to prevent the hive from overheating due to sunlight.
- Always check the correct placement of the frame covers before opening the separation system.
- Periodically check that the gaps in the corners of the frame covers do not exceed 2mm.
- Do not completely seal the frame covers to avoid the formation of condensation and humidity.
- In very hot climates, avoid placing B-BOX in full sun; in very cold climates, find the sunniest spot. In any case, seek advice from a beekeeper for the correct placement of the hive based on the area's climate.
- Perform regular maintenance of the wooden structure, reapplying wood preservative at least once every two years or more frequently in adverse weather conditions.
- Keep B-BOX in open environments where the bees have freedom of movement (entering and exiting the chimney).
- Keep the hive's chimney away from the home chimney or other sources that might emit smoke or pollutants.
- Periodically check the health status of the bees.
- Bees sting and can cause allergic reaction and/or anaphylactic shock.
- Do not introduce foreign objects into the hive.
- Make sure the bees have moved down into the central body of the hive before extracting the frames.
- For additional protection, use gloves, goggles, and a smoker when collecting honey.
- Do not disturb the bees by tapping on the transparent walls.
- In the presence of minors, ensure their behavior is appropriate and respectful of the bees to avoid and prevent unpleasant stings.
- Avoid standing and/or passing in front of the exit of the chimney.

Dear customer,

thank you for your support and the trust you have placed in us.

During these months of hard work, we have always strongly believed in our project and the values that drove us to produce B-BOX; protecting bees, safeguarding biodiversity, passion for honey and tradition, and the pursuit of innovation to bring everyone closer to the world of beekeeping.

Despite the various obstacles encountered along the way, the entire *Beeing* team has worked hard to complete the project with passion and dedication.

We are happy that our project is completed, and we are equally happy that there are so many people around the world who, like us and you, believe in the importance of protecting bees and biodiversity. Now that you have received your B-BOX, you can produce and consume your zero-mile honey and get to know the world of bees up close.

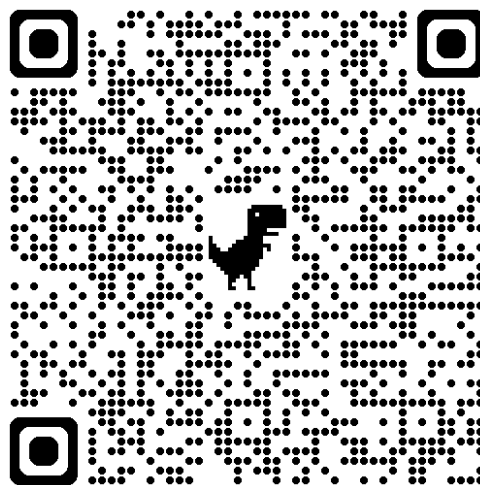

It is a world to be discovered, so get ready to stay updated with readings, meetings, courses, and to stay in touch with a local beekeeper who can guide and advise you.

We hope you will become increasingly passionate about beekeeping!

We remain at your disposal for anything.

Thank you again and happy beekeeping!

The Beeing Team
